The Ecology of Fungal Entomopathogens Helen E. Roy, Fernando E. Vega, Mark S. Goettel, Dave Chandler, Judith K. Pell, Eric Wajnberg

Understanding of the ecology of fungal entomopathogens has vastly increased since the early 1800's, but remains challenging. The often complex interactions between pathogen and host are being unravelled through eloquent research and the importance of the often subtle interactions, in determining the success or failure of biological control, cannot be underplayed. The realm of ecology is vast and deciphering insect-fungal pathogen interactions within an ecological context will take us on voyages beyond our imagination. This book brings together the work of renowned scientists to provide a synthesis of recent research on the ecology of fungal entomopathogens exploring host-pathogen dynamics from the context of biological control and beyond.

Dr. Helen Roy leads zoological research in the Biological Records Centre at the NERC Centre for Ecology & Hydrology, UK. The focus of her research is insect community interactions with particular emphasis on the effects of environmental change. She has been working on the ecological interactions between fungal entomopathogens and their hosts for 15 years; this continues to be a source of fascination. She has been an associate editor of *BioControl* since 2006.

Dr. Dave Chandler is an insect pathologist at the University of Warwick, UK. He has studied entomopathogenic fungi for just over 20 years. He has particular interests in entomopathogenic fungi as biocontrol agents of horticultural crops, fungal physiology and ecology, and the pathogens of honeybees.

Dr. Mark Goettel is an insect pathologist at the Lethbridge Research Centre of Agriculture & Agri-Food Canada, specializing in the development of fungal entomopathogens as microbial control agents of insects. In addition to this research, he has been extensively involved in the review and revision of the regulations for registration of microbial control agents and has addressed regulatory and safety issues at the international level. He is currently President of the Society for Invertebrate Pathology and has been Editor-in-Chief of *Biocontrol Science & Technology* since 2000.

Dr. Judith K. Pell heads the Insect Pathology Group in the Department for Plant and Invertebrate Ecology at Rothamsted Research, UK. She leads research on the ecology of fungal entomopathogens, to elucidate their role in population regulation and community structure and to inform biological control strategies. Specifically: intraguild interactions; the relationships between guild diversity, habitat diversity and ecosystem function; pathogen-induced host behavioural change.

Dr. Eric Wajnberg is a population biologist specialising in behavioural ecology, statistical modelling and population genetics. He is also an expert in biological control, with more than 20 years experience of working with insect parasitoids. He has been the Editor in Chief of *BioControl* since 2006.

Dr. Fernando E. Vega is an entomologist with the United States Department of Agriculture, Agricultural Research Service, in Beltsville, Maryland, USA. He conducts research on biological methods to control the coffee berry borer, the most important insect pest of coffee throughout the world. He is co-editor, with Meredith Blackwell, of *Insect-Fungal Associations: Ecology and Evolution*, published by Oxford University Press in 2005, and serves as an Editorial Board Member for *Fungal Ecology*.

From reader reviews:

Shannon Batiste:

In this 21st one hundred year, people become competitive in most way. By being competitive right now, people have do something to make these people survives, being in the middle of the crowded place and notice through surrounding. One thing that at times many people have underestimated it for a while is reading. Sure, by reading a book your ability to survive boost then having chance to stand than other is high. To suit your needs who want to start reading a new book, we give you this particular The Ecology of Fungal Entomopathogens book as starter and daily reading book. Why, because this book is greater than just a book.

Bruce Brown:

Typically the book The Ecology of Fungal Entomopathogens will bring someone to the new experience of reading a new book. The author style to elucidate the idea is very unique. When you try to find new book to read, this book very acceptable to you. The book The Ecology of Fungal Entomopathogens is much recommended to you you just read. You can also get the e-book through the official web site, so you can more easily to read the book.

David Brouwer:

Does one one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Aim to pick one book that you never know the inside because don't evaluate book by its include may doesn't work this is difficult job because you are frightened that the inside maybe not as fantastic as in the outside appearance likes. Maybe you answer may be The Ecology of Fungal Entomopathogens why because the amazing cover that make you consider regarding the content will not disappoint an individual. The inside or content will be fantastic as the outside or perhaps cover. Your reading 6th sense will directly assist you to pick up this book.

Raymond Brown:

Are you kind of stressful person, only have 10 or perhaps 15 minute in your day to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are experiencing problem with the book as compared to can satisfy your short space of time to read it because this time you only find book that need more time to be examine. The Ecology of Fungal Entomopathogens can be your answer given it can be read by you actually who have those short free time problems.
