Micromanufacturing Processes

Micromanufacturing Processes

Increased demand for and developments in micromanufacturing have created a need for a resource that covers both the science and technology of this rapidly growing area. With contributions from eminent professors and researchers actively engaged in teaching, research, and development, **Micromanufacturing Processes** details the basic principles, tools, techniques, and latest advances in micromanufacturing processes. It includes coverage of measurement techniques and research trends as well as a large number of cross-references, making it useful to the students and researchers alike.

The book outlines the challenges faced not only in micromanufacturing but also in meso- and nanomanufacturing, exploring topics such as *micromachining*, micro welding, microforming, micromolding, nanofinishing and micro-/nano-metrology. It includes examples that demonstrate the capabilities of fabricating micro- / nano-products and micro- / nano-features on the macro and micro products. The text also discusses nanofinishing techniques giving surface finish in the domain of sub-nano level, micro welding techniques, namely, laser beam micro welding, electron beam micro welding, micro / nano patterning in large quantities, and micro / nano metrology principles and equipments. It goes on to describe devices such as nano spring, micro mixer, micro cantilever, to name just a few.

Unique in its level of coverage, the book highlights new challenges in manufacturing and covers several different types of micromanufacturing processes, such as micromachining, microforming, microcasting, microjoining, nanofinishing, and micrometrology. The level of details, extensive references, figures, and diagrams make the book a reference that will become the standard for this field.

From reader reviews:

Walter McBride:

The book Micromanufacturing Processes give you a sense of feeling enjoy for your spare time. You can use to make your capable far more increase. Book can to be your best friend when you getting pressure or having big problem with the subject. If you can make reading through a book Micromanufacturing Processes for being your habit, you can get more advantages, like add your capable, increase your knowledge about a few or all subjects. You could know everything if you like start and read a publication Micromanufacturing Processes. Kinds of book are a lot of. It means that, science guide or encyclopedia or other people. So , how do you think about this reserve?

Mary Richards:

Here thing why this Micromanufacturing Processes are different and trusted to be yours. First of all reading through a book is good nonetheless it depends in the content than it which is the content is as tasty as food or not. Micromanufacturing Processes giving you information deeper since different ways, you can find any publication out there but there is no book that similar with Micromanufacturing Processes. It gives you thrill reading through journey, its open up your eyes about the thing this happened in the world which is probably can be happened around you. You can easily bring everywhere like in park your car, café, or even in your means home by train. If you are having difficulties in bringing the published book maybe the form of Micromanufacturing Processes in e-book can be your alternative.

Sheila Lefevre:

The book with title Micromanufacturing Processes includes a lot of information that you can learn it. You can get a lot of advantage after read this book. That book exist new knowledge the information that exist in this e-book represented the condition of the world today. That is important to yo7u to know how the improvement of the world. This book will bring you in new era of the glowbal growth. You can read the e-book on the smart phone, so you can read the idea anywhere you want.

Kathy Ahmed:

As a college student exactly feel bored to reading. If their teacher inquired them to go to the library or make summary for some reserve, they are complained. Just little students that has reading's heart and soul or real their pastime. They just do what the trainer want, like asked to go to the library. They go to there but nothing reading significantly. Any students feel that reading is not important, boring and can't see colorful pics on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this period, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So , this Micromanufacturing Processes can make you experience more interested to read.
