## Science and Philosophy (Routledge Revivals): And Other Essays Bernard Bosanquet

First published in 1927, *Science and Philosophy: And Other Essays* is a collection of individual papers written by Bernard Bosanquet during his highly industrious philosophical life. The collection was put together by Bosanquet's wife after the death of the writer and remains mostly unaltered with just a few papers added and the order of entries improved. The papers here displayed consist of various contributions Bosanquet made to *Mind*, the *Proceedings of the Aristotelian Society*, the *International Journal of Ethics* and other periodicals, as well as work from volumes of lectures and essays under his own or other editorship.

Throughout the collection, Bosanquet considers the relationship between science and philosophy. The two subject areas became increasingly intertwined during Bosanquet's lifetime as scientific writers grew more interested in the philosophical investigation of the concepts which underlined their work and philosophical thinkers recognised the importance of the relationship between mathematics and logic as well as that between physics and metaphysics. The first essay in this volume discusses this idea explicitly and all subsequent articles may be regarded as essays in support of the main discussion with which the volume opens.
