Here is an important book for social scientists interested in the influence of gender on certain types of behavior. Several perspectives are presented on the general topic of biopolitics and gender, including the points of view of brain science, endocrinology, ethology, psychophysiology, and such conventional interests as political attitudes, socialization, participation, social structure, and political hierarchy. The varied and provocative ideas explored in this volume will broaden discussions of gender beyond an exclusive focus on sex links to oppression and discrimination.
