**The Gene Revolution and Global Food Security: Biotechnology Innovation in Latecomers** Padmashree Gehl Sampath, Banji Oyelaran-Oyeyinka

This book, a product of original national-level primary data collection in selected Asian and African countries, raises important issues of contemporary concern to innovation in agricultural biotechnology within a framework that links the literature on science, technology and innovation to development. Relying on sound theoretical as well as empirical arguments, the book proposes ways in which traditional technologies should be complemented with new technologies of biotechnology in resolving the food crisis and urban poverty. It situates the solution to the extant food crisis within the broader agenda of innovation and poverty reduction as different from simply doing more research and development (R&D). To this end the book provides a more nuanced understanding of the nexus of science and economic development using the Green and Gene Revolutions as conceptual exemplars. This book is a valuable addition to both the innovation as well as the development economic literature and should be read by all those interested in solving the twin problems of economic development and poverty.
