Dielectric Materials for Wireless Communication Mailadil T. Sebastian

Microwave dielectric materials play a key role in our global society with a wide range of applications, from terrestrial and satellite communication including software radio, GPS, and DBS TV to environmental monitoring via satellite.

A small ceramic component made from a dielectric material is fundamental to the operation of filters and oscillators in several microwave systems. In microwave communications, dielectric resonator filters are used to discriminate between wanted and unwanted signal frequencies in the transmitted and received signal.

When the wanted frequency is extracted and detected, it is necessary to maintain a strong signal. For clarity it is also critical that the wanted signal frequencies are not affected by seasonal temperature changes. In order to meet the specifications of current and future systems, improved or new microwave components based on dedicated dielectric materials and new designs are required. The recent progress in microwave telecommunication, satellite broadcasting and intelligent transport systems (ITS) has resulted in an increased demand for Dielectric Resonators (DRs). With the recent revolution in mobile phone and satellite communication systems using microwaves as the propagation media, the research and development in the field of device miniaturization has been a major challenge in contemporary Materials Science. In a mobile phone communication, the message is sent from a phone to the nearest base station, and then on via a series of base stations to the other phone. At the heart of each base station is the combiner/filter unit which has the job of receiving the messages, keeping them separate, amplifying the signals and sending them onto the next base station. For such a microwave circuit to work, part of it needs to resonate at the specific working frequency. The frequency determining component (resonator) used in such a high frequency device must satisfy certain criteria. The three important characteristics required for a dielectric resonator are (a) a high dielectric constant which facilitates miniaturization (b) a high quality factor (Q_{xf}) which improves the signal-to-noise ratio, (c) a low temperature coefficient of the resonant frequency which determines the stability of the transmitted frequency.

During the past 25 years scientists the world over have developed a large number of new materials (about 3000) or improved the properties of known materials. About 5000 papers have been published and more than 1000 patents filed in the area of dielectric resonators and related technologies. This book brings the data and science of these several useful materials together, which will be of immense benefit to researchers and engineers the world over.

The topics covered in the book includes factors affecting the dielectric properties, measurement of dielectric properties, important low loss dielectric material systems such as perovskites, tungsten bronze type materials, materials in BaO-TiO₂ system, (Zr,Sn)TiO₄, alumina, rutile, A_nB_{n-1}O_{3n} type materials, LTCC, ceramic-polymer composites etc. The book also has a data table listing all reported low loss dielectric materials with properties and references arranged in the order of increasing dielectric constant.

Key Features:

- collects together in one source data on all new materials used in wireless communication
- includes tabulated properties of all reported low loss dielectric materials
- in-depth treatment of dielectric resonator materials

From reader reviews:

Joseph Chandler:

With other case, little folks like to read book Dielectric Materials for Wireless Communication. You can choose the best book if you'd prefer reading a book. Providing we know about how is important any book Dielectric Materials for Wireless Communication. You can add expertise and of course you can around the world by the book. Absolutely right, since from book you can understand everything! From your country until foreign or abroad you will find yourself known. About simple factor until wonderful thing you are able to know that. In this era, we are able to open a book or searching by internet system. It is called e-book. You can use it when you feel fed up to go to the library. Let's learn.

Paula Salas:

Reading a publication can be one of a lot of action that everyone in the world likes. Do you like reading book so. There are a lot of reasons why people enjoyed. First reading a e-book will give you a lot of new facts. When you read a publication you will get new information because book is one of numerous ways to share the information or maybe their idea. Second, examining a book will make an individual more imaginative. When you reading a book especially hype book the author will bring you to imagine the story how the personas do it anything. Third, you can share your knowledge to other individuals. When you read this Dielectric Materials for Wireless Communication, you could tells your family, friends and also soon about yours guide. Your knowledge can inspire average, make them reading a publication.

Jerry Lyon:

Reading a guide tends to be new life style within this era globalization. With studying you can get a lot of information that will give you benefit in your life. Using book everyone in this world can share their idea. Books can also inspire a lot of people. A lot of author can inspire their very own reader with their story or perhaps their experience. Not only the storyline that share in the publications. But also they write about the data about something that you need example. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors on this planet always try to improve their ability in writing, they also doing some investigation before they write on their book. One of them is this Dielectric Materials for Wireless Communication.

Sue Joseph:

Beside that Dielectric Materials for Wireless Communication in your phone, it could give you a way to get closer to the new knowledge or data. The information and the knowledge you may got here is fresh from oven so don't be worry if you feel like an old people live in narrow community. It is good thing to have Dielectric Materials for Wireless Communication because this book offers to you personally readable information. Do you oftentimes have book but you don't get what it's exactly about. Oh come on, that won't happen if you have this with your hand. The Enjoyable set up here cannot be questionable, just like

treasuring beautiful island. So do you still want to miss the item? Find this book and read it from right now!
