Reinforcement Learning and Dynamic Programming Using Function Approximators (Automation and Control Engineering) Lucian Busoniu, Robert Babuska, Bart De Schutter, Damien Ernst

From household appliances to applications in robotics, engineered systems involving complex dynamics can only be as effective as the algorithms that control them. While Dynamic Programming (DP) has provided researchers with a way to optimally solve decision and control problems involving complex dynamic systems, its practical value was limited by algorithms that lacked the capacity to scale up to realistic problems.

However, in recent years, dramatic developments in Reinforcement Learning (RL), the model-free counterpart of DP, changed our understanding of what is possible. Those developments led to the creation of reliable methods that can be applied even when a mathematical model of the system is unavailable, allowing researchers to solve challenging control problems in engineering, as well as in a variety of other disciplines, including economics, medicine, and artificial intelligence.

Reinforcement Learning and Dynamic Programming Using Function Approximators provides a comprehensive and unparalleled exploration of the field of RL and DP. With a focus on continuous-variable problems, this seminal text details essential developments that have substantially altered the field over the past decade. In its pages, pioneering experts provide a concise introduction to classical RL and DP, followed by an extensive presentation of the state-of-the-art and novel methods in RL and DP with approximation. Combining algorithm development with theoretical guarantees, they elaborate on their work with illustrative examples and insightful comparisons. Three individual chapters are dedicated to representative algorithms from each of the major classes of techniques: value iteration, policy iteration, and policy search. The features and performance of these algorithms are highlighted in extensive experimental studies on a range of control applications.

The recent development of applications involving complex systems has led to a surge of interest in RL and DP methods and the subsequent need for a quality resource on the subject. For graduate students and others new to the field, this book offers a thorough introduction to both the basics and emerging methods. And for those researchers and practitioners working in the fields of optimal and adaptive control, machine learning, artificial intelligence, and operations research, this resource offers a combination of practical algorithms, theoretical analysis, and comprehensive examples that they will be able to adapt and apply to their own work.

Access the authors' website at www.dcsc.tudelft.nl/rlbook/ for additional material, including computer code used in the studies and information concerning new developments.

From reader reviews:

John Lien:

Playing with family in a park, coming to see the coastal world or hanging out with pals is thing that usually you may have done when you have spare time, after that why you don't try matter that really opposite from that. One activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition details. Even you love Reinforcement Learning and Dynamic Programming Using Function Approximators (Automation and Control Engineering), it is possible to enjoy both. It is very good combination right, you still desire to miss it? What kind of hang type is it? Oh can occur its mind hangout people. What? Still don't have it, oh come on its identified as reading friends.

Joshua Smith:

Your reading sixth sense will not betray you actually, why because this Reinforcement Learning and Dynamic Programming Using Function Approximators (Automation and Control Engineering) guide written by well-known writer who knows well how to make book that may be understand by anyone who also read the book. Written inside good manner for you, leaking every ideas and composing skill only for eliminate your personal hunger then you still doubt Reinforcement Learning and Dynamic Programming Using Function Approximators (Automation and Control Engineering) as good book but not only by the cover but also by content. This is one guide that can break don't judge book by its deal with, so do you still needing yet another sixth sense to pick this kind of!? Oh come on your examining sixth sense already told you so why you have to listening to an additional sixth sense.

Bonnie Lugo:

You can get this Reinforcement Learning and Dynamic Programming Using Function Approximators (Automation and Control Engineering) by check out the bookstore or Mall. Simply viewing or reviewing it could possibly to be your solve difficulty if you get difficulties for the knowledge. Kinds of this guide are various. Not only by written or printed but additionally can you enjoy this book by simply e-book. In the modern era like now, you just looking by your mobile phone and searching what your problem. Right now, choose your own ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose correct ways for you.

Ronald Sadowski:

What is your hobby? Have you heard in which question when you got learners? We believe that that concern was given by teacher with their students. Many kinds of hobby, Everybody has different hobby. And you know that little person similar to reading or as reading through become their hobby. You should know that reading is very important in addition to book as to be the matter. Book is important thing to increase you knowledge, except your current teacher or lecturer. You will find good news or update concerning something

by book. Numerous books that can you decide to try be your object. One of them is this Reinforcement Learning and Dynamic Programming Using Function Approximators (Automation and Control Engineering).
